

# Clarity - Class ID Error When exporting to SAP Business 1

## **Problem:**

Class not registered error when exporting GL data to SAP

## **Solution:**

With January 2007 release our Clarity program are using DIAPL component of SAP 2005 and the SAP 2005 is not backward compatible. So this error message is due to the fact that you are running 2004 version of SAP and our Paymate program works with SAP 2005.
